context is a force in evaluation it shapes our practice influencing how we approach and
design our studies how we carry them out and how we report our findings context also
moderates and mediates the outcomes of the programs and policies we evaluate this issue
focuses squarely on the role that context plays in practice and illuminates its effect on the
implementation and outcomes of programs exploring the ways in which attending to
context may improve the quality of evaluation practice the contributions span theory
methods and practice in an effort to move to a more comprehensive conceptualization of
context that can guide our work it provides an historical and theoretical view of evaluators
treatment of context illustrates how context has influenced evaluation practice presents a

neuroscience has largely abandoned its localizationist and mechanistic framework of the
20th century the plastic embodied and network character of our nervous system is widely
acknowledged and systems theory approaches to consciousness dominate the field
however the underlying neuron theory has not changed the neuron doctrine
conceptualizing the single neuron as atomistic one directional source of neural function still
provides the template for our understanding of these basic elements of our nervous system
and the material foundation of consciousness yet the single neuron does not exist as an
isolated unit it is embedded within multiple cellular structural and functional contexts and
highly depends on them for its development neural activity and survival the book discusses
the constraints of the neuron doctrine and its pragmatic reductionism in the light of the
growing knowledge about the brain s connectivity plasticity and systemic and embodied
nature to overcome these constraints the author argues for a new neuron theory depicting
the neuron as bidirectional hub which is at the same time source and product of neural
function this bidirectionality is further characterized by spatial and time dimensions placing
the neuron within a multi level pathway model of psychobiological development from the

perspective of developmental embodiment research furthermore the author discusses the potential of neuroepigenetic markers to characterize the neuron and its range of plasticity within this developmental perspective with its focus on neuroepigenetics the book addresses a knowledge gap in the current study of the neural foundations of psychological functions the multi level and bidirectional perspective is already realized in approaches coming from developmental systems theory which model neural function at the connectome level and it also fits with approaches investigating feedback loops underlying neural activity at the single cell level at both these levels the spatial and the time dimensions are well characterized either as changing connectivity patterns across different age groups or as synaptic feedback loops underlying neural activation patterns however for the intermediate level of small neural populations which is currently the main target for studies investigating the neural basis of specific psychological functions this characterization turned out to be more challenging multi cell recordings have provided a first glimpse into the complex interaction patterns of these small neural networks but they are limited to the recording period and do not provide information about the long term developmental and activation history here neuroepigenetic markers could be of use due to their relative stability and at the same time environmental sensitivity neuroepigenetic markers represent an additional layer of information in which to a certain degree the cell's metabolic and activation history is aggregated over time this information is available at the single neuron level but could also be modeled as aggregated information for small neural populations and the supporting cellular context looking through this epigenetic lens adds to our understanding of the neuron as bidirectional hub by emphasizing the molecular correlates of functional stabilization and their contextual prerequisites these prerequisites reach from the immediate cellular context to the social cultural contexts which shape the culturally specific modes of acquisition of psychological functions throughout the lifespan accounting for this multilayered contextuality of the neuron and its function affords to repositions the relationship between neuroscience and psychology in their joint effort to unravel the material basis of consciousness this provides new challenges but also new perspectives for theoretical psychology the book presents these current developments and debates to researchers graduate students and interested professionals and practitioners working in neuroscience epigenetics psychiatry psychology and psychotherapy it also provides a basic introduction into neuroepigenetics its mechanisms and first findings for graduate students as well as interested professionals and practitioners working in psychiatry psychology and psychotherapy

this engaging book provides in depth discussion of the various influences that an audience in 1606 would have brought to interpreting king lear how did people think about the world about god about sin about kings about civilized conduct learn about the social hierarchy gender relationships parenting and family dynamics court corruption class tensions the literary profile of the time the concept of tragedy and all the subversions transgressions and oppositions that made the play an unsettling picture of a disintegrating world in free fall

stewart shapiro's aim in *vagueness in context* is to develop both a philosophical and a formal model theoretic account of the meaning function and logic of vague terms in an idealized version of a natural language like english it is a commonplace that the extensions of vague terms vary with such contextual factors as the comparison class and paradigm cases a person can be tall with respect to male accountants and not tall even short with respect to professional basketball players the main feature of shapiro's account is that the extensions and anti extensions of vague terms also vary in the course of a conversation even after the external contextual features such as the comparison class are fixed a central thesis is that in some cases a competent speaker of the language can go either way in the borderline area of a vague predicate without sinning against the meaning of the words and the non linguistic facts shapiro calls this open texture borrowing the term from friedrich waismann the formal model theory has a similar structure to the supervaluationist approach employing the notion of a sharpening of a base interpretation in line with the philosophical account however the notion of super truth does not play a central role in the development of validity the ultimate goal of the technical aspects of the work is to delimit a plausible notion of logical consequence and to explore what happens with the sorites paradox later chapters deal with what passes for higher order vagueness vagueness in the notions of determinacy and borderline and with vague singular terms or objects in each case the philosophical picture is developed by extending and modifying the original account this is followed with modifications to the model theory and the central meta theorems as shapiro sees it vagueness is a linguistic phenomenon due to the kinds of languages that humans speak but vagueness is also due to the world we find ourselves in as we try to communicate features of it to each other vagueness is also due to the kinds of beings we are there is no need to blame the phenomenon on any one of those aspects

the suggestion that the new testament contains citations of early christological hymns has long been a controversial issue in new testament scholarship as a way of advancing this facet of new testament research matthew e gordley examines the colossian hymn col 1 15 20 in light of its cultural and epistolary contexts as a result of a broad comparative analysis he claims that col 1 15 20 is a citation of a prose hymn which represents a fusion of jewish and greco roman conventions for praising an exalted figure a review of hymns in the literature of second temple judaism demonstrates that the colossian hymn owes a number of features to jewish modes of praise likewise a review of hymns in the broader greco roman world demonstrates that the colossian hymn is equally indebted to conventions used for praising the divine in the greco roman tradition in light of these hymnic traditions of antiquity the analysis of the form and content of the colossian hymn shows how the passage fits well into a greco roman context and indicates that it is best understood as a quasi philosophical prose hymn cited in the context of a paraenetic letter finally in view of ancient epistolary and rhetorical theory and practice an analysis of the role of the hymn in colossians suggests that the hymn serves a number of significant rhetorical functions throughout the remainder of the letter

context is what contributes to interpret a communicative act beyond the spoken words it provides information essential to clarify the intentions of a speaker and thus to identify the actual meaning of an utterance a large amount of research in pragmatics has shown how wide ranging and multifaceted this concept can be context spans from the preceding words in a conversation to the general knowledge that the interlocutors supposedly share from the perceived environment to features and traits that the participants in a dialogue attribute to each other this last category is also very broad since it includes mental and emotional states together with culturally constructed knowledge such as the reciprocal identification of social roles and positions the assumption of a cognitive point of view brings to the foreground a number of new questions regarding how information about the context is organized in the mind and how this kind of knowledge is used in specific communicative situations a related very important question concerns the role played in this process by theory of mind abilities to both in typical and atypical populations in this research topic we bring together articles that address different aspects of context analysis from theoretical and empirical perspectives integrating knowledge and methods derived from philosophy of language linguistics cognitive science cognitive neuroscience developmental and clinical psychology
